

PROBLEMAS DE TRIGONOMETRÍA

Problema 3:

Hallar los valores de las líneas trigonométricas del arco de 240° , sin recurrir a las tablas.

Solución Problema 3:

Aplicaremos las razones de ángulos que difieren en 180° . Así:

$$\sin(180 + x) = -\sin x$$

$$\cos(180 + x) = -\cos x$$

$$\tan(180 + x) = \tan x$$

$$\cot(180 + x) = \cot x$$

$$\sec(180 + x) = -\sec x$$

$$\csc(180 + x) = -\csc x$$

Por tanto,

$$\sin 240 = \sin(180 + 60) = -\sin 60 = -\frac{\sqrt{3}}{2}$$

$$\cos 240 = \cos(180 + 60) = -\cos 60 = -\frac{1}{2}$$

$$\tan 240 = \tan(180 + x) = \tan 60 = \sqrt{3}$$

$$\cotg 240 = \cotg(180 + x) = \cotg 60 = \frac{\sqrt{3}}{2}$$

$$\sec 240 = \sec(180 + 60) = -\sec 60 = -2$$

$$\cosec 240 = \cosec(180 + 60) = -\cosec 60 = -\frac{2\sqrt{3}}{2}$$
