

PROBLEMAS DE TRIGONOMETRÍA

Problema 149:

Transformar la siguiente expresión en otra que no figure más que $\operatorname{tg} x$:

$$\frac{\operatorname{sen}^2 x + \frac{\operatorname{sen} 2x}{2} + \operatorname{cos}^2 x}{1 - \operatorname{sen}^2 x}$$

Solución Problema 149:

$$\begin{aligned}\frac{\operatorname{sen}^2 x + \frac{\operatorname{sen} 2x}{2} + \operatorname{cos}^2 x}{1 - \operatorname{sen}^2 x} &= \frac{\operatorname{sen}^2 x + \operatorname{cos}^2 x + \frac{\operatorname{sen} 2x}{2}}{\operatorname{cos}^2 x} = \frac{1 + \frac{\operatorname{sen} 2x}{2}}{\operatorname{cos}^2 x} = \\ \frac{\frac{2 + \operatorname{sen} 2x}{2}}{\operatorname{cos}^2 x} &= \frac{2 + \operatorname{sen} 2x}{2\operatorname{cos}^2 x} = \frac{2}{2\operatorname{cos}^2 x} + \frac{\operatorname{sen} 2x}{2\operatorname{cos}^2 x} = \frac{1}{\operatorname{cos}^2 x} + \frac{2\operatorname{sen} x \operatorname{cos} x}{2\operatorname{cos}^2 x} = \\ &= \frac{1}{\sec^2 x} + \frac{\operatorname{sen} x \operatorname{cos} x}{\operatorname{cos}^2 x} = \operatorname{tg}^2 x + 1 + \frac{\operatorname{sen} x}{\operatorname{cos} x} = \operatorname{tg}^2 x + 1 + \operatorname{tg} x = \operatorname{tg}^2 x + \operatorname{tg} x + 1\end{aligned}$$
